APPENDICES

| | |
|---|-----|
| A - Survey of Computerized Front-End Verification Techniques: State or Local Front-End Technique Profile | 214 |
| B - Glossary of Abbreviations and Terms | 221 |

Foreword

This catalog highlights the results of a survey of State front-end or prepayment automated techniques used to verify eligibility for four major benefit programs: Aid to Families with Dependent Children, Food Stamps, Medicaid and Unemployment Insurance. The techniques reported here are used to prevent fraud and errors; i.e., they are used to confirm eligibility for benefits before any payments are made. The catalog has been compiled by the U.S. Department of Health and Human Services' Office of the Inspector General (OIG), under the aegis of the President's Council on Integrity and Efficiency, to promote the sharing of money-saving computer technology among all the States and U.S. territories.

The Deficit Reduction Act (DEFRA), signed by President Reagan in July 1984, includes new provisions on income and eligibility verification procedures. These procedures will directly affect how States confirm the eligibility of applicants for the benefit programs mentioned above. The new DEFRA provisions will enable federally funded welfare agencies to make more accurate eligibility determinations and benefit payments by exchanging information with each other and by obtaining unearned income data from the Internal Revenue Service and wage and other income information from the Social Security Administration. The techniques described in this catalog are employed at the front-end; many of them accomplish one or more of the goals mandated under DEFRA. Thus, this compendium will help States identify efficient, effective ways to comply with the income and eligibility verification regulations to be published in the near future.

By widely disseminating this comprehensive listing of preventive computer applications, we intend to assist those States and jurisdictions considering implementing front-end techniques or enhancing their systems. Although much attention has been given to computer techniques in recent years, this is the first national study to concentrate solely on prepayment use of automated verification systems. Our goal in publishing this catalog is to identify the increasing use of automated front-end verification applications and to offer possible systems for replication.

This catalog does not recommend one technique over another. Rather, it lists all current techniques and those under development. Section I includes background information and the study methodology. Section II presents summary data about the kinds and levels of front-end techniques reported by all 50 States, the District of Columbia and the jurisdictions of Guam,

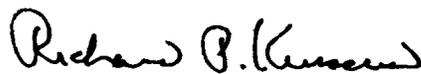

Puerto Rico and the Virgin Islands. Section III contains individual descriptions of the 173 different techniques reported as in use or under development by the jurisdictions. The appendices contain the survey which was sent to the States, and a glossary of abbreviations and terms.

This project would not have been possible without the participation of the States and territories surveyed. Thanks to their cooperation, we have been able to gather important data on a new preventive technology and thus help reduce fraud, waste and abuse in welfare and employment security programs.

This catalog is the product of many efforts over long months. During that time, I have chaired an interdisciplinary work group from the various Offices of Inspectors General and other organizations. Their contributions have been critical to compiling this catalog, which I am certain will promote the increased use of automated front-end verification techniques. I would like to thank the work group members: Mary Barry, Department of Housing and Urban Development; Allene Brown, Department of Education; Paula Hayes, Department of Agriculture; Les Johnson, Department of Agriculture; Doug Hunt, National Aeronautics and Space Administration; Virgil Jones, Department of Health and Human Services; Mike Marshall, Department of Agriculture; Pat Skees, Department of Labor; Pat Spierer, Department of Agriculture; and Clayton Vickland, D.C. Department of Human Services.

From my staff, Elisabeth Handley served as Project Director, with the help of Alana Landey, Assistant Director, Elsie Chaisson, Ed Meyers, Gail Shelton, Jane Tebbutt and Charlette Ross.

Additional copies of this catalog are available from the U.S. Department of Health and Human Services, Office of the Inspector General, Office of Analysis and Inspections, 330 Independence Avenue, S.W., Room 5643, Washington, D.C. 20201.

Richard P. Kusserow
Inspector General

SECTION I - BACKGROUND INFORMATION ON STUDY

Background

Over the past several years, Federal and State governments have become heavily dependent on computers in many facets of their daily activities. Over 20,000 mainframe computerized systems have been identified in the Federal Government to date, and the number of State systems is growing at a rapid rate. This increased use of data processing is especially critical to the many public benefit programs, which distribute billions of dollars in public aid annually. In these times of decreasing resources, data processing technology provides program administrators with an opportunity to increase productivity while keeping operating costs constant.

One organization involved deeply in this issue is the President's Council on Integrity and Efficiency (PCIE). The PCIE, composed of Federal agency Inspectors General and chaired by the Deputy Director of the Office of Management and Budget (OMB), was created by President Reagan in March 1981 to coordinate Government-wide efforts to reduce fraud, waste and abuse. One of the PCIE's concerns is to encourage States to use computer technology in administering their benefit programs as one means of preventing overpayments and reducing welfare fraud. The Council has emphasized the use of "front-end" or "prepayment" techniques that are used to verify applicants' eligibility before they receive any payments, thus preventing overpayments and insuring that benefits reach only those entitled to them.

What Are Automated Front-End Eligibility Verification Systems?

An automated front-end eligibility verification system or technique, as we have defined it, is a method to ensure via computer that an applicant to a benefit program is entitled to the benefits before actual payment or award is made. An example would be a statewide network of computers containing data on State residents receiving unemployment compensation benefits, which are used by eligibility workers at the beginning of the eligibility determination process to determine if applicants are accurately reporting this type of income. No ruling on eligibility would be made and no benefits would be paid until the unemployment compensation benefit information has been received, analyzed, and verified. In benefit programs such as Aid to Families with Dependent Children (AFDC), Food Stamps and Medicaid, unearned income such as this is one of the keys to eligibility, and the fast and accurate verification of it is critical to preventing erroneous payments.

Eligibility factors other than unearned income can also be verified on the front-end. Other eligibility factors listed in this catalog include earned income, age, citizenship,

identity, work history, and others. Regardless of which eligibility factors are verified, each technique in this catalog employs a computer to verify certain facts about applicants before benefits are awarded.

Why Front-End Verification Techniques?

The Federal Government is specifically interested in front-end or prepayment eligibility verification techniques because such techniques improve the efficiency and effectiveness of benefit programs and save money by preventing erroneous payments or overpayments. A preventive, proactive approach to the error and abuse in benefit programs can detect waste and prevent theft before those who have accidentally or intentionally misrepresented their circumstances receive payments.

While it is impossible to pinpoint the exact dollars saved via deterrence measures, effective deterrence is cost-beneficial given the expenses incurred through detecting and eliminating already-existing fraud and abuse. These costs include searching for and identifying crime, tracking the perpetrator, possible court costs, and often lengthy and ineffective collection procedures to recoup losses.

Automation especially lends itself to fraud prevention efforts, given its speed and accuracy. A computerized eligibility verification system can match or screen data in seconds, often while the applicant is still in the office. The Federal Government, via the PCIE, encourages the use of such techniques because automated front-end verification systems help avoid the expense of overpayments resulting from either applicant fraud or human mistake.

Parameters of This Catalog

This catalog lists automated front-end eligibility verification techniques currently used or under development for use in States' Aid to Families with Dependent Children, Food Stamp, Medicaid and Unemployment Insurance programs. These four programs were selected because they are among the largest in terms of people served and program expenditures. Also, since the project could not encompass all public assistance or benefit programs, we opted to focus on programs with high levels of public participation.

The catalog concentrates only on prepayment techniques because of their considerable prevention/deterrence effects outlined above. The project considers only automated verification systems because, although many manual front-end eligibility

verification techniques are known to be in use, manual applications are labor-intensive and time-consuming. Project work group members agreed that the project's focus should be on the most efficient eligibility verification methods possible, i.e., automated methods.

Methodology of the Project

Our project goals were (1) to identify the level of State activity in automated front-end eligibility verification systems and (2) to encourage more States to use such systems. We decided to concentrate only on computer matches and screens because they are automated processes which involve the comparison of sets of data elements, either between two separate computer files (a match) or within the same file (a screen). Computers are the ideal method of performing routinized comparisons between extensive listings of data such as benefit program participants and new applicants, given the speed with which they can process vast amounts of information.

A category of automated front-end technique which we chose not to consider is the edit - a check in a system to assure that data elements entered are within certain acceptable limits. Edits are very commonplace and it would take considerable space to list the hundreds of routine edits used by the States. Also it appears that edits serve as threshold checks to prevent non-entry or inconsistent entry of data rather than to verify eligibility.

To complete the project, a questionnaire (see Appendix A) was formulated by work group members and survey design experts. A draft of the survey instrument was pretested in three States: Nevada, Texas and Maryland. The final survey instrument was mailed in late April 1984 to the heads of the departments administering the Aid to Families with Dependent Children, Food Stamp, Medicaid and Unemployment Insurance programs in each State and in the District of Columbia, Guam, Puerto Rico and the Virgin Islands. Thus, the techniques reflect information returned by State officials about State and local systems.

Returned surveys were compiled into a draft catalog which was distributed to State and Federal program officials for comments in March, 1985. After receiving their revisions, comments, and additional techniques, this final catalog was prepared. The techniques contained in it reflect only information supplied by State officials about State and local systems, and is current as of August 30, 1985. Eight agencies out of 109 did not respond to the initial survey or to the draft catalog. (The same eight did not respond to both the survey and the draft catalog). Thus, the catalog has a response rate of 93 percent.

We screened each returned survey for both the draft and final catalogs for whether it fit the definition of a front-end eligibility verification technique. In addition, we eliminated non-qualifying techniques, such as those involving automated eligibility determination processes instead of verification processes and those involving eligibility verification after receipt of benefits. Work group members made follow-up telephone calls to complete those surveys which lacked information or required clarification.

Some data from the surveys, such as cost effectiveness figures, are not listed in the individual descriptions in this catalog. Little information was supplied on these items, and what data we did get was usually incomplete - i.e., States told us how much a technique cost without providing savings figures, or they provided out-of-date numbers. On the other hand, there are data in the catalog's descriptions which were not requested on the survey form. This information was obtained either from the narrative descriptions provided by the States or in our follow-up telephone calls.

While we were very interested in collecting information on the impact of the individual techniques, the data provided by States were too incomplete to include. As Appendix A indicates, on the initial survey we asked States, for each technique, their developmental and operating costs, annual savings, annual number of applications denied, and numbers of raw and valid hits. For 54 of the 128 techniques, some information was provided for the eligibility verification techniques reported in the March 1985 draft catalog. The table below illustrates the paucity of consistent information across techniques:

For the draft catalog:

| <u>Information</u> | <u>Number of Techniques Reporting Data</u> (Out of 128) |
|---|--|
| Developmental Costs | 34 (27 percent) |
| Annual Operating Costs | 27 (21 percent) |
| Annual Savings | 13 (10 percent) |
| Number of Applications Denied Annually | 16 (13 percent) |
| Number of Raw Hits | 13 (10 percent) |
| Number of Valid Hits | 10 (8 percent) |

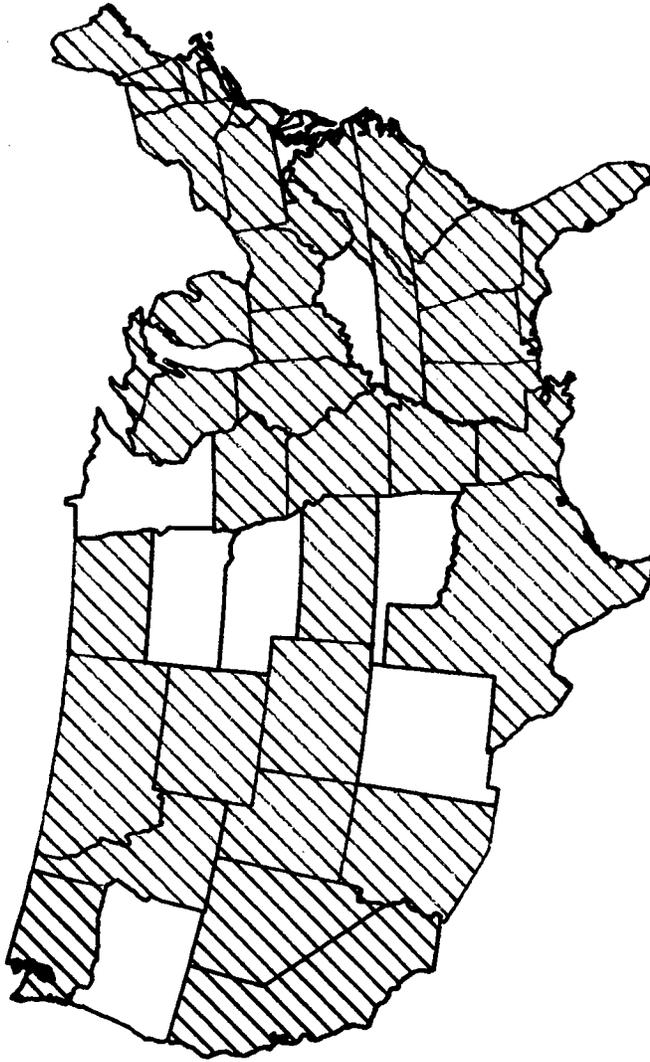

What this table does not show is how diverse responses were. States provided savings estimates without any operating cost estimates and vice versa. The figures themselves were in "old" dollars (i.e., a State might report developmental costs for

1976), and did not include the State's methodology for arriving at a particular number. For example, one agency estimated that it cost them \$200 to develop and \$10 annually to operate a system which verifies earned income. Another agency estimated that 98 percent of the hits they obtain from a check for duplicate benefits are valid. Clearly, further explanation is needed. Because of these difficulties, these data were not included.

SECTION II - SUMMARY DATA FROM THE SURVEYS

The data for the charts and tables which follow were extracted from the individual technique descriptions.

LOCATION OF EMPLOYMENT SECURITY TECHNIQUES *

 One or more Unemployment Insurance
Techniques in Operation or Under
Development

 No Unemployment Insurance
Techniques Reported. (This category
includes survey nonrespondents.)

* Alaska, Puerto Rico and the Virgin Islands each reported one or more Unemployment Insurance techniques. Hawaii reported no Unemployment Insurance techniques. Guam does not have an Unemployment Insurance program.

NUMBER OF TECHNIQUES BY STATE

| STATE | A G E N C Y | |
|----------------------|-------------|---------------------|
| | WELFARE* | EMPLOYMENT SECURITY |
| Alabama | 5 | 2 |
| Alaska | 1 | 1 |
| Arizona | 3 | 1 |
| Arkansas | 2 | 1 |
| California | 1** | 1 |
| Colorado | 3 | 3 |
| Connecticut | 2 | 1 |
| Delaware | 9 | N/A*** |
| District of Columbia | 5 | 2 |
| Florida | 2 | 2 |
| Georgia | 1 | 2 |
| Guam | 0 | 0 |
| Hawaii | 5 | 0 |
| Idaho | 3 | 1 |
| Illinois | 1 | 3 |
| Indiana | 1 | 4 |
| Iowa | 4 | 1 |
| Kansas | 0 | 1 |
| Kentucky | 2 | 0 |
| Louisiana | 1 | 1 |

| Puerto Rico | 0**** | 1 |
| Rhode Island | 0 | 1 |
| South Carolina | 1 | 1 |
| South Dakota | 0 | 0 |

NUMBER OF TECHNIQUES BY STATE

| STATE | A G E N C Y | |
|----------------|-------------|---------------------|
| | WELFARE* | EMPLOYMENT SECURITY |
| Tennessee | 1 | 1 |
| Texas | 5 | 5 |
| Utah | N/A | 2 |
| Vermont | 2 | 1 |
| Virginia | N/A | 3 |
| Virgin Islands | 0**** | 1 |
| Washington | 2 | 1 |
| West Virginia | 1 | 1 |
| Wisconsin | 1 | 2 |
| Wyoming | 0 | 4 |
| | <hr/> | <hr/> |
| | 100 | 73 |

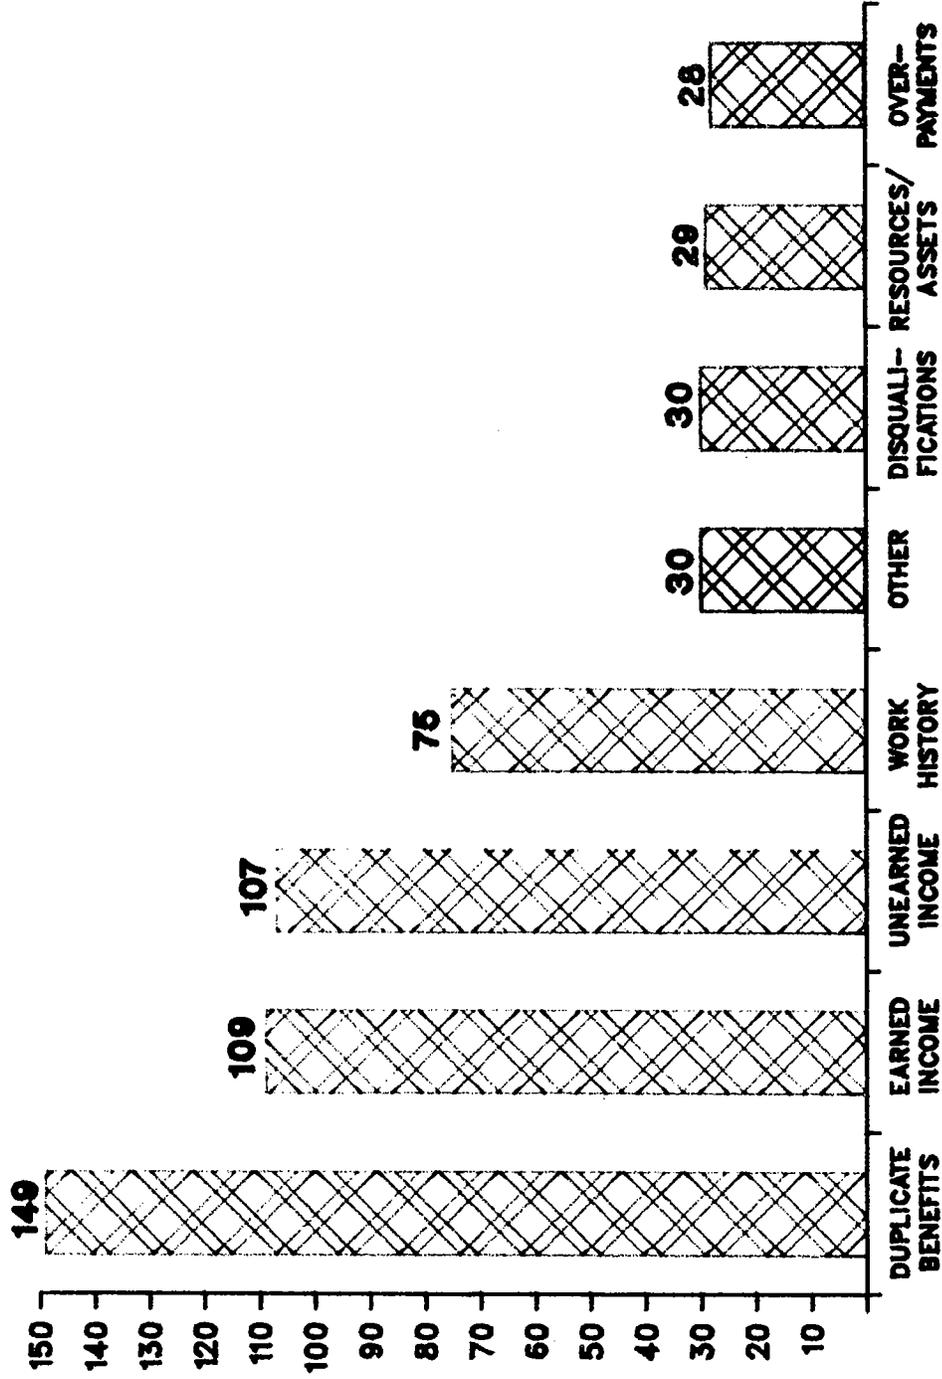

*Welfare refers to the agencies administering AFDC, Food Stamps, and Medicaid. Employment Security refers to the agencies administering Unemployment Insurance.

**The agency responsible for administering California's AFDC and Food Stamp programs did not respond to the survey or draft catalog.

***N/A means not available. Agencies with this listing did not respond to the survey or draft catalog. A zero indicates that an agency responded negatively.

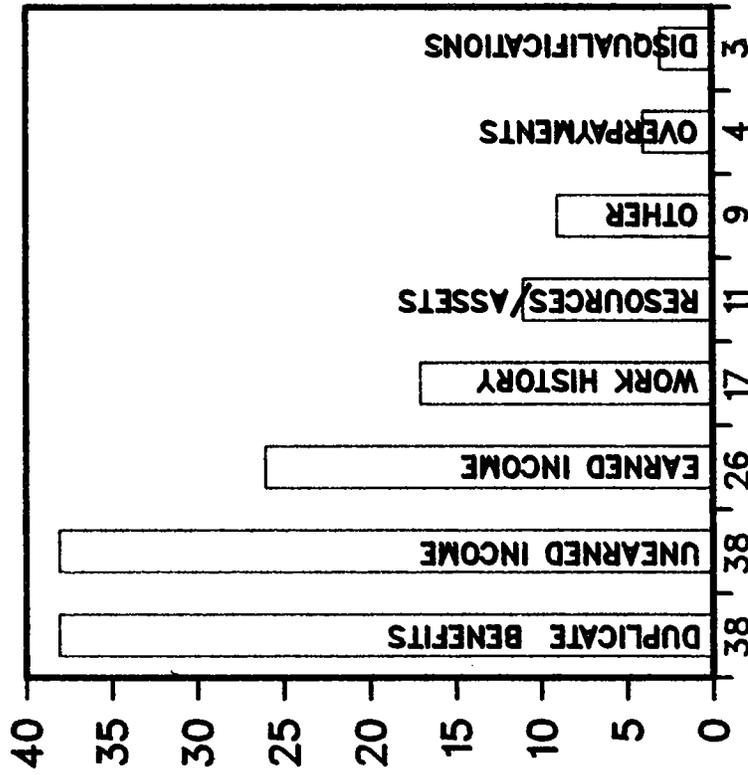

****The Puerto Rico and Virgin Island Medicaid agencies did not respond to the survey or draft catalog.

TOTAL NUMBER OF TECHNIQUES VERIFYING ELIGIBILITY FACTORS *

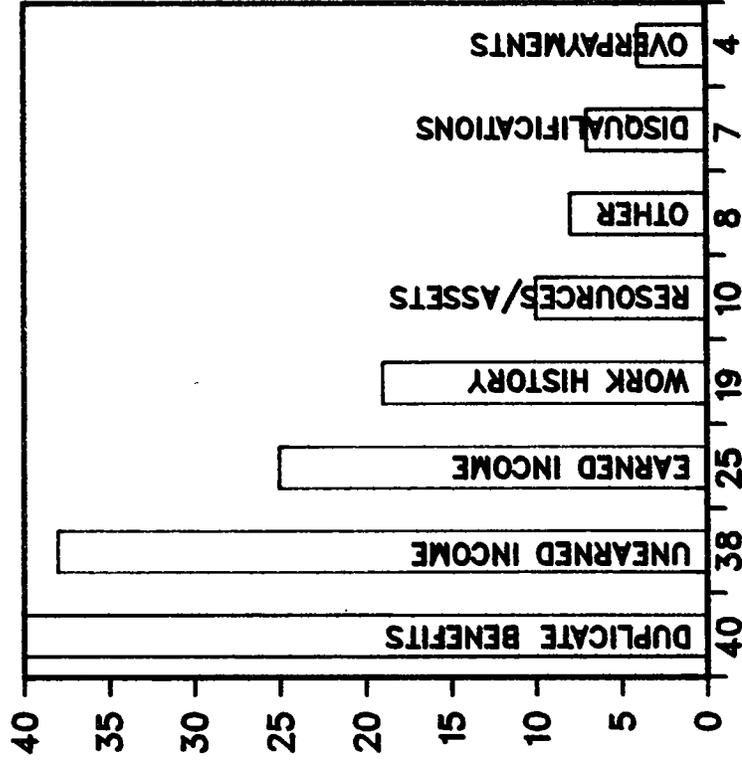

* The number of techniques listed in the graph is greater than the number of techniques reported because many techniques had multiple goals.

NUMBER OF TECHNIQUES VERIFYING ELIGIBILITY FACTORS, BY PROGRAM *

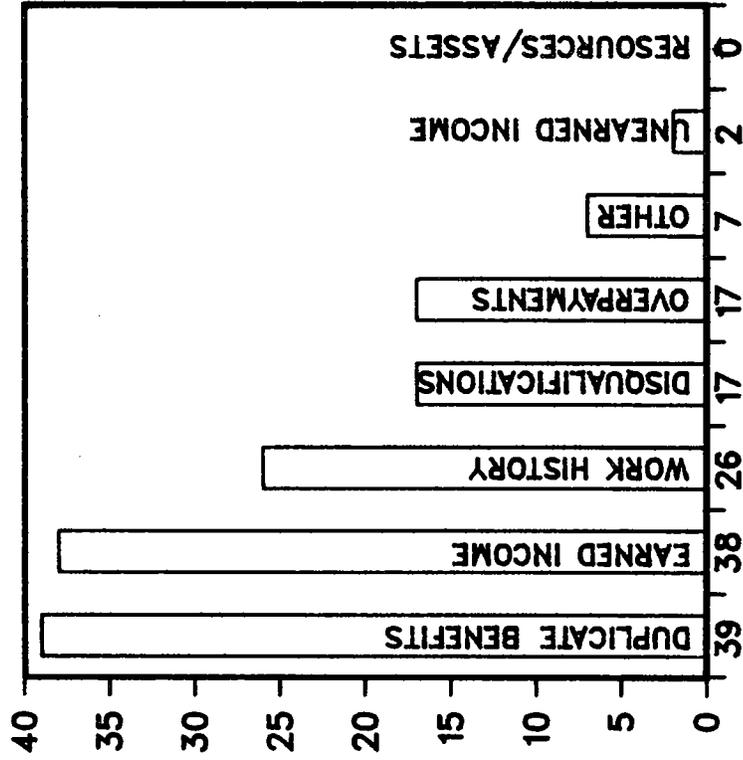

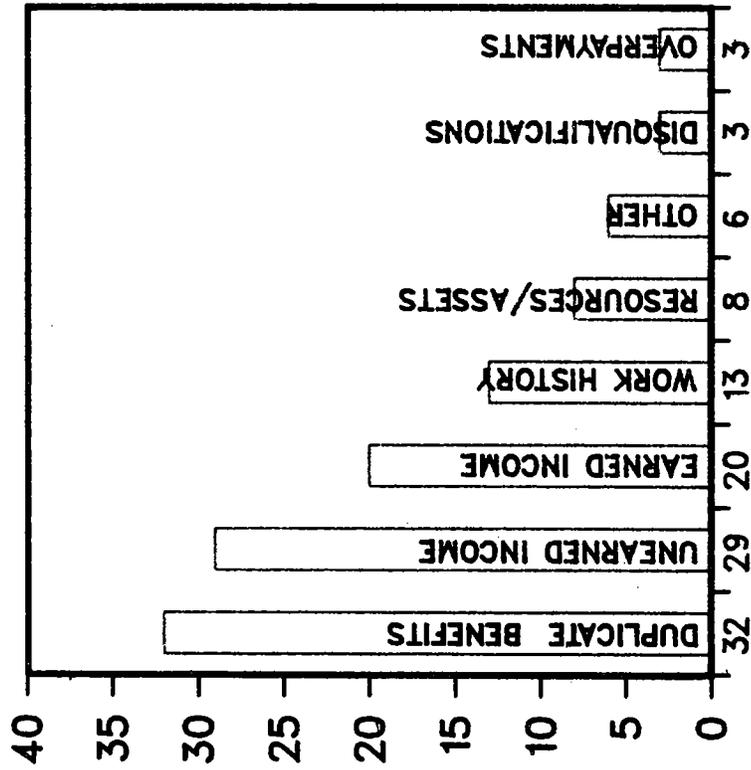

AFDC

FOOD STAMPS

* The number of techniques listed for each graph is greater than the number of techniques reported for each program because many techniques had multiple goals.

NUMBER OF TECHNIQUES VERIFYING ELIGIBILITY FACTORS, BY PROGRAM

MEDICAID

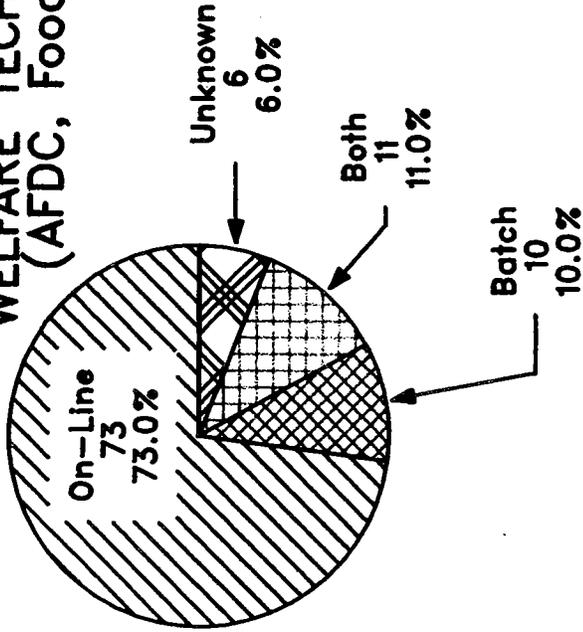

UNEMPLOYMENT INSURANCE

* The number of techniques listed for each graph is greater than the number of techniques reported for each program because many techniques had multiple goals.

METHOD OF COMPUTER PROCESSING

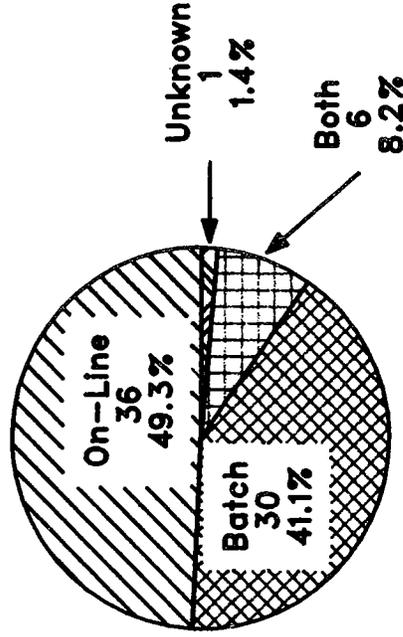

WELFARE TECHNIQUES (AFDC, Food Stamps and Medicaid)

Total Number of Welfare Techniques Reported = 100 (58% of the total 173 techniques reported)

EMPLOYMENT SECURITY TECHNIQUES (Unemployment Insurance)

Total Number of Employment Security Techniques Reported = 73 (42% of the total 173 techniques reported)

INDEX OF TECHNIQUES BY PROGRAM, FACTOR VERIFIED AND PAGE NUMBER

The techniques listed under each program verify an eligibility element for the program indicated. It should be noted that the technique may verify eligibility for multiple programs. The listing below indicates only one program so readers may see the universe of techniques for each program.

AFDC PROGRAM

| Name of Technique | Duplicate Benefits | Earned Income | Unearned Income | Work History | Resources/ Assets | Disqualifications | Over-payments | Other | Page Number |
|---|--------------------|---------------|-----------------|--------------|-------------------|-------------------|---------------|-------|-------------|

SECTION III - INDIVIDUAL TECHNIQUE DESCRIPTIONS

ALABAMA

AGENCY: Department of Pensions and Security

NAME: Verification of Applicant not Already Receiving AFDC

PURPOSE: To prevent duplicate benefits

PROGRAM: AFDC

FILE: AFDC Recipient

STATUS: Operational since 1982.

DESCRIPTION: Two checks for duplicate benefits are done. When an AFDC applicant first applies, a check for existing benefits is performed on-line using the applicant's SSN or name. If the applicant is already receiving assistance, a new case cannot be opened. After eligibility has been determined but before a check has been issued, a second (batch) check is done. The AFDC computer system contains a screen which disallows duplicate SSNs on the AFDC master file. Every record on file has an SSN or a temporary number. The case will not be awarded if an applicant's SSN is already on file.

PROCESSING: On-line & batch

USE: Mandatory

ALABAMA

AGENCY: Department of Pensions and Security

NAME: Verification of Lack of SSI Income

PURPOSE: To verify unearned income

PROGRAM: AFDC

FILE: State Data Exchange

STATUS: Operational since 1982.

DESCRIPTION: The State takes the State Data Exchange tape received monthly from the Social Security Administration and puts it into its computer, creating a data base that workers access on-line. Workers inquire on an SSI screen to determine if an AFDC applicant is currently receiving SSI benefits.

PROCESSING: On-line

USE: Mandatory

ALABAMA

AGENCY: Department of Pensions and Security

NAME: Verification of AFDC Reported Income as Compared to Food Stamp Reported Income

PURPOSE: To verify unearned income

PROGRAM: AFDC

FILE: Food Stamp Recipient

STATUS: Operational since 1981.

DESCRIPTION: Before awarding an AFDC case, workers use on-line access to screen a Food Stamp case to determine if there is a discrepancy between AFDC and Food Stamp reported income. This is a screen which shows workers what the applicant's Food Stamp benefit amount is.

PROCESSING: On-line USE: Mandatory

ALABAMA

AGENCY: Department of Pensions and Security

NAME: Verification of WIN Registration

PURPOSE: To verify work registration

PROGRAM: AFDC

FILE: Employment Services Work Incentive

STATUS: Operational since March 1984.

DESCRIPTION: The AFDC master file and Employment Services WIN file are matched monthly and produce WIN registration reports. Since the system contains an edit which does not allow a case to be opened unless a WIN registration verification code has been entered, the WIN reports notify the worker that the applicant has registered for WIN. Thus, the worker may enter the WIN verification code.

PROCESSING: Batch

ALABAMA

AGENCY: Medicaid Agency

NAME: Automated Application System

PURPOSE: To prevent duplicate benefits

PROGRAM: Medicaid

FILE: Medicaid Recipient

STATUS: Operational in three districts since 1982. Phased implementation for remainder of state scheduled for 1985.

DESCRIPTION: As part of the Automated Application System, when a Medicaid application is received in the Medicaid district office, the eligibility and application file is screened. This screen shows whether the applicant has received Medicaid in the past, is currently eligible through another program, or has applied in another Medicaid district office.

ALABAMA

AGENCY: Unemployment Compensation Agency

NAME: Monetary Eligibility for Unemployment Compensation Benefits

PURPOSE: To verify earned income and work history

PROGRAM: Unemployment Compensation Benefits

FILE: Wage

STATUS: Operational since before 1964.

DESCRIPTION: This technique determines the claimant's monetary eligibility by accessing the base period wage file. Each local office has a computer terminal which is used to access wages on-line to determine if sufficient wages in the proper time frame exist to qualify the claimant for benefits.

PROCESSING: On-line

USE: Mandatory

ALABAMA

AGENCY: Unemployment Compensation Agency

NAME: Nonmonetary Eligibility for Unemployment Compensation Benefits

PURPOSE: To verify disqualifications

PROGRAM: Unemployment Compensation Benefits

FILE: Disqualifications

STATUS: Operational since before 1964.

DESCRIPTION: This technique aids the worker in making an eligibility determination by determining if any previous disqualifications are still in effect. Workers have on-line access to a disqualifications file, which they match with applicant data at their discretion. Previous disqualifications still in effect are detected by the computer.

PROCESSING: On-line

USE: At worker's discretion

ALASKA

AGENCY: Department of Public Assistance

NAME: Eligibility Information System

PURPOSE: To prevent duplicate benefits, and to verify earned and unearned income

PROGRAMS: AFDC, Food Stamps (public and non-public assistance) and Medicaid

FILES: Wage, Unemployment Compensation Benefits, Permanent Fund Dividend, AFDC, Food Stamp and Medicaid Recipients

STATUS: Operational in entire State since July 1984. (First State office began using in October 1983).

DESCRIPTION: The Eligibility Information System is an automated eligibility determination and verification system. As part of the verification system, on-line checks of an applicant's wages, UCB and Permanent Fund Dividend proceeds are done for all applicants. (The Permanent Fund Dividend is an Alaskan program which distributes excess State funds to citizens as dividends. By checking this file, the worker learns of any income an applicant may have received from this source). Workers also perform an on-line check of current recipients to insure that the applicant isn't already receiving benefits.

AGENCY: Department of Labor

NAME: Pseudo Monetary

PURPOSE: To prevent duplicate benefits and to verify earned income and work history

PROGRAM: Unemployment Compensation Benefits

FILES: Wage, Unemployment Compensation Benefits and Employer

STATUS: Operational since 1980.

DESCRIPTION: When an applicant comes into a local office, she or he is shown a pseudo-monetary determination with all applicable wages and employers displayed. The pseudo-monetary determination is performed by a computer. Possible benefits are calculated and displayed. The applicant can immediately detect errors in wages or employers. Workers also use the displayed work history and wage data to confirm that the applicant has sufficient wages to be eligible. In addition, workers check the data base for existing beneficiaries to insure the applicant doesn't receive duplicate benefits.

AGENCY: Department of Economic Security

NAME: CACIS Inquiry and APIS System

PURPOSE: To prevent duplicate benefits

PROGRAMS: AFDC, Food Stamps (public and non-public assistance), Medicaid and General Assistance

FILES: AFDC, Food Stamp and Medicaid Recipient

STATUS: Operational since 1979.

DESCRIPTION: When an applicant applies for assistance, two checks to prevent duplicate benefits are completed. First, an inquiry for current or past benefits is performed on-line using the applicant's Social Security Number or name. If the applicant is already receiving assistance, the application will be denied. If this type of match is not successful, and eligibility has not been determined, a second batch check is done using the applicant's Social Security Number. If the applicant is currently participating in the program applied for, the system will reject the action.

AGENCY: Department of Economic Security

NAME: Initial Claim Processing

PURPOSE: To prevent duplicate benefits and to verify earned income

PROGRAM: Unemployment Compensation Benefits

FILES: Wage and Unemployment Compensation Benefits

STATUS: Operational since 1969.

DESCRIPTION: Two checks for wages are done. In the first, when an applicant comes into the local office, the eligibility worker may opt to match his or her SSN on-line against wages already on file in order to determine if the applicant has sufficient wage credits. A second match, which is mandatory, is done automatically when applications are later sent from the local office to a central State processing location. One to two days after this batch match is run, wage statements listing all recorded wages are sent to local offices.

A match between applicants' SSNs and the claimant master file containing data on current UCB recipients is also done. A case cannot be established if there is already an existing benefit year attributed to an individual. Thus, this technique prevents the issuance of duplicate benefits.

PROCESSING: On-line and batch USE: Mandatory and at worker's discretion

AGENCY: Department of Health Services

NAME: File Compatibility Check

PURPOSE: To prevent duplicate benefits

PROGRAMS: AFDC, Food Stamps (non-public assistance) and Medicaid (MediCal)

FILES: AFDC, Food Stamp and Medicaid Recipients

STATUS: Operational various lengths of time depending upon county. Begun in first county in 1982. Operational in 7 counties only for Food Stamps.

DESCRIPTION: The File Compatibility Check is used to compare applicants to the above programs with the recipient data base to prevent duplicate issuance of benefits. County eligibility workers enter applicant data into the county's central data processing system. A daily tape of all applicant data is created by the county and sent to a central state processing location. All counties have on-line data entry capability, so a local office tape need not be created. A central batch match is performed, matching applicant SSNs against SSNs in the recipient data base. Within 3 to 4 days, county workers receive the match results.

CONNECTICUT

AGENCY: Department of Labor

NAME: Claimant Name/Wage Record Match

PURPOSE: To prevent duplicate benefits, and to verify earned income and work history

PROGRAM: Unemployment Compensation Benefits

FILES: Wage and Unemployment Compensation Benefits

STATUS: Operational since 1972.

DESCRIPTION: Prior to awarding UCB to an applicant, the local office which has taken the claim mails applicant data to a central office to have monetary eligibility calculated. At the central processing site, data off the application is entered into a computer system. The applicant's name and SSN are then matched against the wage record file to determine if sufficient wage credits and work weeks exist to establish eligibility. The name on the new claim must be identical to the name on the employer-reported wage record. If it doesn't match, the system will not determine eligibility. Local offices may also confirm wage amounts via terminals in the local office, but cannot edit most data.

When the applicant comes into the local office, the claimant master file, consisting of all current beneficiaries, is also accessed on-line to determine if an existing benefit year has already been established for an individual. This check prevents duplicate benefits. A second check for duplicate benefits is also done centrally during monetary determination (described above).

(302) 421-8223

DELAWARE

AGENCY: Department of Health and Social Services

NAME: Third Party Medical Insurance Verification

PURPOSE: To verify third party medical liability

PROGRAM: Medicaid

FILE: Third Party Medical Liability

STATUS: Under development. Estimated completion date is
January 1986.

DESCRIPTION: Third party medical insurance information is gathered by Medicaid eligibility workers and entered into the Delaware Client Information System (DCIS) for each applicant who has insurance. This kind of information is also gathered by other Delaware agencies (e.g., Public Health clinics and other State medical facilities) and their information can be more current than the information last gathered by the Medicaid worker. These other agencies are developing an automated system that will run on the same computer as the DCIS. Their third party information will then become available to Medicaid staff both for applicants and recipients.

NAME: Project Checkmate

PURPOSE: To verify earned and unearned income and resources/assets

PROGRAM: AFDC

FILE: Credit Bureau

STATUS: Operational as part of a Federal demonstration project begun in September 1983.

DESCRIPTION: As part of a larger demonstration project called Project Checkmate, AFDC applicants in one district office are being screened against credit bureau records. This check provides information on income, resources, bank accounts, credit balances, and employment. The worker sends applicant data to Project staff who perform an on-line check of credit bureau records. The data is then returned to the worker for use in determining eligibility.

AGENCY: Income Maintenance Administration

NAME: On-Line Motor Vehicle Records

PURPOSE: To verify resources/assets, residency and living arrangements

PROGRAMS: AFDC, Food Stamps (non-public assistance) and Medicaid

FILE: Motor Vehicles

STATUS: Operational since 1984.

DESCRIPTION: As part of D.C.'s larger front-end verification system, upon receipt of an AFDC, Food Stamp or Medicaid application and to verify continuing eligibility, the eligibility worker performs an on-line inquiry to access motor vehicle registration data. Workers verify name, date of birth and vehicle registration and can obtain information necessary to determine if excess resources exist. Workers use this technique to detect unreported assets for an automobile with an equity value over \$1,500, to verify addresses, and to detect a possible continued living arrangement between husband and wife.

AGENCY: Department of Employment Services

NAME: Claim Check

PURPOSE: To prevent duplicate benefits and to verify earned income

PROGRAM: Unemployment Compensation Benefits

FILES: Wage and Unemployment Compensation Benefits

STATUS: Operational since July 1982.

DESCRIPTION: When a UCB applicant comes into the local office, the worker has the option of using a computer terminal to check to see if the individual is already receiving benefits and if the individual has sufficient wage credits to qualify for UCB. Using the applicant's SSN as an identifier, the worker screens the file containing current and past beneficiaries and the wage file which contains employer-reported wages. An additional review of existing beneficiaries is done at the time the application is input. If an unexpired benefit year is in the system (i.e., if a claim has already been established), a new claim cannot be established. This second check for duplicate benefits is done via an overnight batch process.

PROCESSING: On-line and batch USE: Mandatory and at worker's discretion

AGENCY: Department of Labor

NAME: Entry of Initial Unemployment Insurance Claim

PURPOSE: To prevent duplicate benefits and to verify earned income

PROGRAM: Unemployment Compensation Benefits

FILE: Unemployment Compensation Benefits

STATUS: Operational since 1975.

DESCRIPTION: When a UCB applicant files a claim, his or her applicant information is entered into the computer system. Each night the applicant information is matched against the existing UCB claim file, via batch processing. If another claim already exists for the same SSN, the system rejects the new application and a transfer notice is produced, copies of which are sent to the office filing the claim and the office where the current claim exists. If there is no record of a claim on file, a monetary determination is done. In this process, the applicant's SSN is matched against the employer-reported wage records to determine if sufficient wage credits exist. The results are mailed to the office where the application was filed.

KENTUCKY

AGENCY: Department for Social Insurance

NAME: Screening for Duplicate Social Security Numbers

PURPOSE: To prevent duplicate benefits

PROGRAMS: AFDC and Medicaid

FILES: AFDC and Medicaid Recipient

STATUS: Operational since 1978.

DESCRIPTION: To check for duplicate benefits, an applicant's SSN is matched against the SSNs of AFDC and Medicaid recipients already on file. When a positive match occurs, the eligibility worker must resolve the issue before proceeding. This match is performed at two different stages: An on-line check is run on an applicant's SSN soon after the applicant first contacts the local office. Later a batch match is run automatically after the applicant has been certified as eligible but prior to receiving benefits.

LOUISIANA

AGENCY: Department of Health and Human Resources

NAME: Client Clearance and State Identification Number
Issuance System (CLIENT)

PURPOSE: To prevent duplicate benefits

PROGRAMS: AFDC, Food Stamps (public & non-public assistance),
Medicaid, General Assistance, Refugee Assistance,
Child Support Enforcement, Vocational
Rehabilitation, Social Services, Foster Care, Day
Care, Mental Retardation/Developmental Disabilities,
Family Planning, Blind Services, Recovery Accounts,
Pending Referrals, Maternal and Child Care

FILES: AFDC, Food Stamps and Medicaid Recipient

STATUS: Under development. Estimated completion date is
January 1986.

DESCRIPTION: The CLIENT System will provide a computerized
file of data on all individuals receiving services provided by
the Department of Health and Human Resources; it will also be a
computer validation system which eliminates duplication of
records. When an applicant makes a request for services or
benefits, the eligibility worker will do a duplicate benefits
check through CLIENT to determine whether or not the applicant
is currently receiving any assistance. The case data for the
relevant programs will be accessed to assist with eligibility
verification for the program for which the applicant is
currently applying.

LOUISIANA

AGENCY: Department of Labor

NAME: Processing of Separation Notices

PURPOSE: To verify disqualifications

PROGRAM: Unemployment Compensation Benefits

FILE: Disqualifications

STATUS: Operational since 1972.

DESCRIPTION: If an individual is separated from employment for a potentially disqualifying reason under the Unemployment Compensation Benefits program, the employer completes a Form LDOL-ES 77 and returns it to the Louisiana Department of Labor. The form is microfilmed and keypunched. Some of the data from the form is maintained on the computer system and is available on terminals located in local offices. When an individual files for UCB, the local office must query this file prior to paying benefits. This mandatory inquiry only tells the worker if a separation notice alleging disqualification has been filed by an employer. The microfilm must be accessed and copied (manually) in order for the worker to learn the reason for separation.

MISSISSIPPI

AGENCY: Department of Public Welfare

NAME: Mississippi Application Verification Eligibility
Reporting Information Control System (MAVERICS)

PURPOSE: To prevent duplicate benefits, and to verify
identity, earned and unearned income,
resources/assets, work history, relationship and
residency

PROGRAMS: AFDC, Food Stamps (public & non-public assistance)

FILES: AFDC and Food Stamp Recipient, Wage, Unemployment
Compensation Benefits, Division of Motor Vehicles

STATUS: Under development. Estimated completion date is
February 1987.

DESCRIPTION: MAVERICS, once implemented, will employ a variety
of data base interfaces to provide eligibility-related data to
the worker before an applicant is certified as eligible to
receive benefits. Some of the matches will be on-line, and
some matches will involve batch processing. The State data
bases of AFDC, Food Stamps, and Medicaid recipients will be
checked for duplicate benefits, the Division of Motor Vehicles
for unreported assets such as automobiles, and the Employment
Security Department UCB and wage files for receipt of UCB and
wages. Most of these sources will be matched on-line. Wage
data from neighboring States will be accessed via batch
processing.

STATUS: Operational since 1976.

DESCRIPTION: Before an AFDC or Medicaid applicant can be certified as eligible, a caseworker initiates an on-line search of State birth records maintained by the Division of Health and Vital Statistics. The goals of this technique are twofold: 1) to prevent the payment of AFDC or Medicaid benefits to non-existent children or to individuals who are no longer minors and thus not eligible for certain benefits; and 2) to insure that the applicant is claiming as dependents only those who are related to her or him.

MISSOURI

AGENCY: Division of Employment Security

NAME: Premonetary Determination Process

PURPOSE: To verify earned income and work history

PROGRAM: Unemployment Compensation Benefits

FILE: Wage

STATUS: Operational since 1977.

DESCRIPTION: For each initial claim filed in a local office, the worker receives on his or her terminal a preliminary monetary determination. This preliminary determination is generated by matching the applicant's Social Security Number with the wage file. Earnings by quarter, applicant's name, employer(s)' name(s) and account number(s) are displayed. This process helps the worker determine if the applicant has sufficient wage credits for UCB and if the wages attributed to him or her are accurate.

MONTANA

AGENCY: Unemployment Insurance Division

NAME: Name Verification

PURPOSE: To prevent duplicate benefits and to verify earned income

PROGRAM: Unemployment Compensation Benefits

FILES: Wage and Unemployment Compensation Benefits

STATUS: Operational since 1981.

DESCRIPTION: When an applicant files for UCB, his or her application is sent from the local office taking the claim to a central office for data entry and batch processing. There the claim is matched in several ways. The applicant's name is matched against the wage file to insure that the wages on file are attributed to the correct individual and that the applicant has sufficient wage credits. A check against the file of existing UCB claimants is also done to insure that the applicant isn't already receiving benefits.

NEVADA

AGENCY: Department of Human Resources

NAME: Welfare Referral System Income Assistance Check

PURPOSE: To prevent duplicate benefits

PROGRAMS: AFDC, Food Stamps (public and non-public assistance)
and Child Support Enforcement

FILES: AFDC and Food Stamp Recipient

STATUS: Operational since June 1985.

DESCRIPTION: The Welfare Referral System provides the worker with information about the applicant's receipt of income assistance benefits. When an applicant comes into the local office, the worker enters the applicant's name, SSN, and other data into the "key files". This information is matched on-line against welfare data. (Welfare refers to AFDC, Food Stamps, and Child Support.) The worker inquires directly into the system and can generate a hard copy of the match.

NAME: AFDC, Food Stamps and Medicaid Applicant Wage Match

PURPOSE: To verify earned and unearned income and work history

PROGRAMS: AFDC, Food Stamps (public and non-public assistance)
and Medicaid

FILES: Wage and Unemployment Compensation Benefits

STATUS: Operational since 1979.

DESCRIPTION: Applicants for AFDC, Food Stamps and Medicaid complete an application for benefits at any local office. Once a week the State Department of Human Resources (DHR) compiles a magnetic tape using the applicants' SSNs and sends it to the State Employment Security Department (ESD) to be matched against wage and UCB files. Hits are sent back to DHR and distributed to local offices where case workers use the information from the match to determine eligibility. If necessary, local eligibility workers can speed up the process by directly calling ESD which has on-line access to this data.

NEVADA

AGENCY: Employment Security Department

NAME: Pre-monetary Determination

PURPOSE: To prevent duplicate benefits and to verify earned income and work history

PROGRAM: Unemployment Compensation Benefits

FILES: Wage and Unemployment Compensation Benefits

STATUS: Operational since 1980.

DESCRIPTION: The pre-monetary determination is used in the local office to determine if wages attributed to an individual belong to that individual, and to determine if the applicant has sufficient wage credits for UCB. In addition, the technique insures that an existing benefit year is not in effect, thus preventing issuance of duplicate benefits. When the applicant comes into the local office, his or her SSN is keyed into a terminal. A listing of employers and a quarterly breakdown of earnings is generated. If the name and SSN don't match, the worker investigates to see if the wages actually belong to the individual. The worker uses the quarterly breakdown of earnings to see if sufficient wages exist. The SSN is also matched against a file of existing UCB claimants to see if the applicant is already receiving UCB elsewhere.

NAME: Prescreen for Wage and Unemployment Compensation Benefits

PURPOSE: To prevent duplicate benefits and to verify earned and unearned income

PROGRAMS: AFDC and Food Stamps (public and non-public assistance)

FILES: AFDC and Food Stamp Recipients, Wage and Unemployment Compensation Benefits

STATUS: Operational since July 1985.

DESCRIPTION: This technique was originally developed under a cooperative agreement between the State Division of Welfare and the U.S. Department of Health and Human Services Office of Inspector General as part of a pilot test of standardized computer matching formats. At the initial interview in district offices, AFDC and Food Stamp applicant data is coded on a prescreen form and sent to the State office after workers have checked the New Hampshire Eligibility Management System (see Automated Eligibility Management Systems technique) to determine if the applicant is already receiving benefits. All prescreen forms are compiled into a tape in the standardized assistance program format and sent weekly to the Department of Employment Security to be matched against wage and UCB files. Reports from these matches are sent to district offices so that the applicant information can be verified when the applicant returns for the second interview.

NAME: Monetary Determinations

PURPOSE: To prevent duplicate benefits and to verify earned income, work history, disqualifications and overpayments

PROGRAM: Unemployment Compensation Benefits

FILES: Wage, Unemployment Compensation Benefits, Overpayments, and Disqualifications

STATUS: Operational since 1971.

DESCRIPTION: When a UCB application is filed, applicant data is entered onto an input document which is mailed to the central office. This information is batch keyed into the computer. The SSN is matched against several files and the following information is printed out: the wages reported under that SSN in the base period, any name associated with that SSN if different than the one entered, a code indicating any existing disqualifications, a code indicating any existing overpayments, and a message advising if a claim for benefits has previously been filed for that same benefit year in another office. This form is returned to the local office where the claim was filed. This information allows the office to make a determination that the applicant meets the monetary requirements for benefit eligibility and informs them of other conditions.

FILE: Wage

STATUS: Operational since 1971.

DESCRIPTION: Employers submit quarterly wage statements which are entered into the wage record file and retained in the system for six quarters. When a claim for UCB is filed, the claimant's SSN is transmitted by mail to the central office. It is matched against the wage record to identify wages paid during the current base period and credited to that SSN. If sufficient wages are available, the claim is deemed monetarily eligible and further processing of the claim proceeds.

NORTH DAKOTA

AGENCY: Department of Human Services

NAME: Technical Eligibility Computer System (TECS)

PURPOSE: To prevent duplicate benefits and to verify resources/assets

PROGRAMS: AFDC and Food Stamps (public and non-public assistance)

FILES: AFDC and Food Stamp Recipient and Department of Motor Vehicles Records

STATUS: Operational since October 1984.

DESCRIPTION: As part of TECS (which is an automated eligibility determination system), some automated eligibility verification is done. A check for duplicate benefits is made. An AFDC or Food Stamp applicant's name and SSN is matched against a client index of prior and current recipients. If the applicant has received benefits in the past, their historical file is brought up on the screen. If the applicant is currently receiving benefits, the system does not allow a case number to be given.

When completing the automated application, the eligibility worker inputs different kinds of resources. If an automobile is entered as a liquid resource, applicant data is matched on-line against state motor vehicle records.

OHIO

AGENCY: Bureau of Employment Services

NAME: Initial Claim Verification

PURPOSE: To prevent duplicate claims and to verify employer liability

PROGRAM: Unemployment Compensation Benefits

FILES: Unemployment Compensation Benefits and Employer

STATUS: Operational statewide since 1983.

DESCRIPTION: At the time of application, when a UCB claimant comes into the local office, an on-line computer terminal is used to access the benefit claims history file and the employer status file. The purpose of this access is to determine if the claimant has a claim file in another office or if the existing claim overlaps the new claim being filed. The second access compares employer information to determine if the employer was liable for the stated dates of employment on the application and to obtain mailing information to send the wage requests to the employers involved. A comparison for either purpose may result in a reject of the claim for further processing.

PUERTO RICO

AGENCY: Bureau of Employment Security

NAME: No name

PURPOSE: To prevent duplicate benefits, and to verify earned income and work history

PROGRAM: Unemployment Compensation Benefits

FILES: Wage and Unemployment Compensation Benefits

STATUS: Operational since 1970.

DESCRIPTION: When a UCB applicant completes a claim in a local office, essential data elements such as the claimant's name, SSN, and other items are sent to the central office. There they are batch processed. A search for wages is made by matching the applicant's SSN against the wage file, which is comprised of earnings information reported by employers quarterly. A monetary determination is issued by the computer if the claimant meets wage and employment requirements. If eligible, a benefit year is established and a weekly and maximum benefit amount is determined. If a benefit year has already been established, the claim is rejected, thus preventing the issuance of duplicate benefits.

AGENCY: Employment Security Commission

NAME: Monetary Determination Process

PURPOSE: To prevent duplicate benefits, and to verify earned income, work history and overpayments

PROGRAM: Unemployment Compensation Benefits

FILES: Wage, Unemployment Compensation Benefits and Overpayments

STATUS: Operational since 1978.

DESCRIPTION: The automated monetary determination process checks to determine the existence of a prior active claim for benefits before establishing a new claim; this insures that a claimant cannot establish two claims simultaneously. The same process also uses wages previously reported by employers to establish if the claimant has sufficient wage credits to receive UCB. Additionally, the last name of the claimant is checked against the first three letters of the last name in the wage file to insure the wages belong to the claimant. No benefits are paid if the applicant has an outstanding overpayment; a stop order in the computer prevents benefits from being paid by rejecting them as they are processed.

NAME: Cross-Match

PURPOSE: To prevent duplicate benefits and to verify
disqualifications and overpayments

PROGRAM: Unemployment Compensation Benefits

FILES: Unemployment Compensation Benefits, Disqualifications
and Overpayments

STATUS: Operational since 1975.

DESCRIPTION: Applicant is matched against prior and current
claim files, previous disqualification data, and previous
overpayment data. The matches are done to determine if any
conditions exist which would render the applicant ineligible or
if an overpayment balance exists which must be repaid. All
offices have on-line access to this data.

AGENCY: Department of Employment Security

NAME: Premonetary Determination

PURPOSE: To verify earned income and work history

PROGRAM: Unemployment Compensation Benefits

FILE: Wage

STATUS: Under development. Estimated completion date is
January 1986.

DESCRIPTION: When an applicant files for benefits, he or she will be given a premonetary determination that will show all wages and employers that have reported earnings. This will be done on-line by a computer. The applicant's possible benefits will be calculated and displayed. If there are errors in wages or employers, they will be immediately detected. This process will also allow the claimstaker to determine eligibility by showing if sufficient wages exist.

VERMONT

AGENCY: Agency of Human Services

NAME: Name and Social Security Number Match

PURPOSE: To prevent duplicate benefits

PROGRAMS: AFDC, Food Stamps (public and non-public assistance), Medicaid, General Assistance, State Essential Person and Low Income Energy Assistance

FILES: AFDC, Food Stamp and Medicaid Recipient

STATUS: Operational since 1983.

DESCRIPTION: When an applicant comes into a local office, a worker enters his or her name and Social Security Number into the computer. No household member on Vermont's access system can participate using the same name or Social Security Number. This process prevents duplicate benefits and any further processing of such a household member.

WASHINGTON

AGENCY: Department of Social and Health Services

NAME: File Clearance and Preauthorization Cross Checks

PURPOSE: To prevent duplicate benefits

PROGRAMS: AFDC, Food Stamps (public and non-public assistance), Medicaid, CEAP, Refugee Resettlement and State Programs

FILES: AFDC, Food Stamp and Medicaid Recipients

STATUS: Operational since 1974. Over time, incremental changes have been made.

DESCRIPTION: When a person applies for AFDC, Food Stamps, or Medicaid, his or her name is matched against the State's computerized welfare files in the central office via a statewide network of terminals in local offices. The computer system searches recipient files using names and birth dates or SSNs. When a match occurs, the information is displayed on a terminal in the local office. The worker reviews the data to determine if the information is about the applicant. When assistance is authorized but before payment is made, another computer check is made to insure the client is not currently receiving assistance. The authorization is rejected if there is an overlapping payment period.

Clearance Process

PURPOSE: To prevent duplicate benefits, and to verify
overpayments, sanctions and disqualifications

PROGRAMS: AFDC, Food Stamps (public and non-public
assistance), Medicaid and General Assistance

FILES: AFDC, Food Stamp, Medicaid Recipient and Overpayments

STATUS: Under development. Estimated completion date is not
available.

DESCRIPTION: COSMOS is a comprehensive management information
system under development as a Family Assistance Management
Information System (FAMIS) project. When completed, the
applicable portion of COSMOS which will verify eligibility will
check for duplicate benefits. Inquiry into the data base will
be made by the applicant's SSN, name, address or household
number. Potential matches will be displayed on the screen. If
the applicant is identified as being known to the system,
status information will be available such as whether the
applicant is currently receiving benefits, previously received
benefits, was sanctioned, had any previous overpayments, or a
period of ineligibility was established for him or her.

AGENCY: Employment Security Department

NAME: Monetary Determination Process for Unemployment Insurance (UI)

PURPOSE: To prevent duplicate benefits, and to verify earned income, work history and disqualifications

PROGRAM: Unemployment Compensation Benefits

FILES: Wage, Unemployment Compensation Benefits and Disqualifications

STATUS: Operational since 1983.

DESCRIPTION: When a UCB applicant files an initial claim in a local office, his or her SSN and other data is entered on-line into the computer system. The system matches the SSN with existing UCB claims and existing disqualifications, to prevent duplicate benefits and payment to persons who have been disqualified from participation. The system also matches applicant data with the wage file to determine if sufficient wage credits and work hours exist. The claimant receives a copy of the monetary determination generated through this process and any information about items which would prevent a new claim filing.

WEST VIRGINIA

AGENCY: Department of Human Services

NAME: Client Index System

PURPOSE: To prevent duplicate benefits

PROGRAMS: AFDC, Food Stamps (public and non-public assistance)
and Medicaid

FILES: AFDC, Food Stamp and Medicaid Recipients

STATUS: Operational since 1983. System is being enhanced so
that real time updates are made to the recipient data
bases.

DESCRIPTION: The Client Index System consists of automated
alphabetic and SSN indexes of all individuals contained in the
agency's AFDC, AFDCU, Food Stamp, Medicaid, and Medicaid for
the Medically Needy programs. (The AFDCU program is for
unemployed AFDC recipients.) The system allows workers to make
an on-line inquiry by applicant name or SSN and provides the
following information about clients: name, SSN, case
certificate number, county, category of assistance, street
address, zip code, case status (i.e., opened, closed, or
denied), and birthdate. Thus, present receipt of benefits
applied for can be uncovered and duplicate payment prevented.

APPENDICES

APPENDIX A

SURVEY OF COMPUTERIZED FRONT-END VERIFICATION TECHNIQUES
STATE OR LOCAL FRONT-END TECHNIQUE PROFILE

Please indicate your answers below. If your State has more than one automated front-end eligibility verification technique in place or under development, please reproduce the questionnaire and complete one copy for each technique. If the technique is under development, do not answer questions 13, 16, and 19. For your information, a computerized front-end eligibility verification technique means any automated or computerized technique which is used to aid in determining the eligibility of applicants prior to the payment of any benefits.

- 1) Name of agency using technique _____
Name of State _____
- 2) Name of front-end verification technique _____

- 3) Describe the technique and its goals in nontechnical terms. Include a step-by-step description of the workflow. (Do not include a flowchart of the actual computer program).

4) Is the computerized technique

- a match? (A match is the comparison of data elements on two or more computer files.)
- a screen? (A screen is the comparison or analysis of data elements on one computer file.)
- an edit? (An edit is a check in the system to assure that data elements entered are within certain limits.)
- other? (Specify)

5) Check all specific eligibility-related factor(s) on which the computerized technique provides information.

- | | | | |
|------------------------|--------------------------|--------------------------|--------------------------|
| Duplicate Benefits | <input type="checkbox"/> | Work History | <input type="checkbox"/> |
| Identity | <input type="checkbox"/> | Work Registration | <input type="checkbox"/> |
| Income | <input type="checkbox"/> | Other(s) (Specify: e.g., | <input type="checkbox"/> |
| Resources/Assets | <input type="checkbox"/> | household composition, | <input type="checkbox"/> |
| Social Security Number | <input type="checkbox"/> | residency) | <input type="checkbox"/> |
| | | _____ | _____ |
| | | _____ | _____ |

6) Check all program(s) involved in the computerized technique:

- | | | | |
|-----------------------|--------------------------|------------------------|--------------------------|
| AFDC | <input type="checkbox"/> | Medicaid | <input type="checkbox"/> |
| Food Stamps | <input type="checkbox"/> | Unemployment Insurance | <input type="checkbox"/> |
| Public Assistance | <input type="checkbox"/> | Other (Specify) | <input type="checkbox"/> |
| Non-Public Assistance | <input type="checkbox"/> | _____ | _____ |

7) What files are used in the computerized technique? (e.g., in the case of a match, AFDC applicant files might be matched against State birth records).

8) Is the technique

- (a) under development?
If so, when was it begun? _____
What is the estimated completion date? _____

- (b) operational?
How long has it been operating?

9) Is the technique part of a demonstration or pilot project?

Yes _____ No _____

If so, which Federal agency is sponsoring the project?

10) Is the technique used statewide?

Yes _____ No _____

If No:
In which jurisdictions is it used?

Why isn't the technique used statewide?

If statewide use is anticipated, when will it occur?

11) How does management track the disposition of hits? (A hit is defined as a matching of two or more data elements with different or inconsistent information).

12) What were the approximate developmental costs of the computerized technique? (Some of the categories to consider include hardware/software, personnel, computer processing time, file conversion, overhead, and staff training).

13) What are the approximate annual operating costs associated with the use of the computerized technique? (Consider costs for hardware, software, personnel, and so on).

14) Indicate by a checkmark below the sources of funding for the computerized technique.

| | Developmental Funding | Operational Funding |
|---------|--------------------------|------------------------|
| Local | _____ | _____ |
| State | _____ | _____ |
| Federal | _____ | _____ |
| Other | _____ | _____ |

If Federal or "other" funding is checked, list the Federal agency or other source and indicate whether funding was for development or for operation of the technique.

15) What are the approximate annual savings derived or projected from the use of the technique? How are these savings computed?

16) As a result of the use of the technique,
What is the estimated annual number of applications denied?

_____ What is the estimated annual number of raw hits? (A raw hit is an unvalidated or unverified hit).

_____ What percentage of the raw hits were valid hits? (That is, hits that were validated as exceptions.) _____

17) Do you require that applicants be notified in advance of the use of the computerized technique?

Yes _____ No _____

If so, is advance notice required by State law?

Yes _____ No _____

What method of notification is used?

18) What provisions are made for preventing the unauthorized disclosure of information?

19) Has legal action been brought against the State due to the employment of the technique?

Yes _____ No _____

20) Are there any limitations on sharing the technique with Federal, State or local jurisdictions? If so, please specify.

21) List below the person who may be contacted by State and Federal officials for further information.

Name of contact person _____

Title/Position _____

Address _____

Phone number () _____

Date survey completed _____

If you have any questions about this form, please contact:

APPENDIX B

GLOSSARY OF ABBREVIATIONS AND TERMS

- o AFDC - Aid to Families with Dependent Children Program. A State- and federally-administered program which provides financial aid to needy children and their caretaker relatives.
- o BENDEX - Beneficiary and Earnings Data Exchange. An automated system SSA uses to provide States with the eligibility status and payment information of recipients of Social Security Retirement, Survivors and Disability Insurance and eligibility status only of recipients of Supplemental Security Income, Medicare, Black Lung and Railroad Retirement benefits.
- o DoB - Date of Birth
- o Edit - a check in the system to assure that data elements entered are within certain limits.
- o ETA - Employment and Training Administration, U.S. Department of Labor
- o Eligibility Determination - the entire process of determining an applicant's eligibility, including the verification of eligibility factors and the calculation of benefit levels.
- o Eligibility Verification - the process of confirming the accuracy of reported eligibility factors such as earned income, SSN, etc.
- o Front-end - prior to the payment of any benefits or awards to benefit program applicants.
- o FNS - Food and Nutrition Service, U.S. Department of Agriculture
- o FS - Food Stamp Program. A State- and federally-administered benefit program which provides food coupons to low-income households to augment their food budget.
- o HCFA - Health Care Financing Administration, U.S. Department of Health and Human Services
- o Match - the comparison of data elements on two or more computer files (compare to "Screen").

- MCD - Medicaid Program. A State- and federally-administered program which provides medical assistance to welfare recipients and other medically needy persons.
- OFA - Office of Family Assistance, Social Security Administration, U.S. Department of Health and Human Services
- Prepayment - See front-end
- Real Time - near-instantaneous response to on-line inquiries from a computer terminal.
- Sanction - a punishment or penalty such as a fine or exclusion from participation.
- Screen - the comparison or analysis of data elements on one computer file (compare to "Match").
- SDX - State Data Exchange. An SSA automated interface system which lists recipients and payment amounts for Supplemental Security Income.
- SSA - Social Security Administration, U.S. Department of Health and Human Services.
- SSN - Social Security Number
- UCB - Unemployment Compensation Benefits (used interchangeably with "UI")
- UI - Unemployment Insurance Program (used interchangeably with "UCB"). A State- and federally-administered program which provides cash unemployment compensation to those temporarily out of work.
- WIN - Work Incentive Program
